Project Experience

ACZ EWM project

2023/08-To Present

Description

1. Transformed the existing warehouse management system (WMS) into an enhanced warehouse management system (EWM) to support business expansion.
2. Streamlined logistics processes, improving inventory accuracy and operational efficiency.
3. Integrated EWM with other business systems for seamless data flow and better decision-making.
4. Conducted user training to ensure a smooth transition and maximize system utilization.
5. Achieved significant cost savings and increased productivity post-implementation.

Responsibilities

Supporting role

Learn EWM process and customizing by testing and doing.

Support to close identified gap during project, such as enhancement to existing Z program

AAA DP Plant project

2010/06-To Present

Description

1. Configured and setup a new factory in SAP post the company's relocation, ensuring seamless integration into existing business operations.
2. Set up and optimized procurement organizations to align with the changed logistics setup, facilitating efficient purchasing processes.
3. Established and validated shipping points within the system, enhancing supply chain management and shipment tracking capabilities.
4. Conducted thorough testing of all configurations to guarantee functionality and minimize disruptions during the transition phase.

5. Coordinated with cross-functional teams to ensure smooth adoption and user training for the updated SAP environment.

Responsibilities

responsible for MM

Atlas project

2024/01-2024/06

Description

1. Contributed to the SAP integration project following the Volvo paver acquisition, responsible for system configuration in MM and WM area.
2. Assisted in testing the SAP setup to ensure seamless integration with the merged operations.
3. Supported data migration processes, ensuring data accuracy during transition to the SAP platform.
4. Collaborated in creating user training materials, facilitating the adoption of the new SAP system for team members.

WEIFU Fixed Assets implementation

2022/12-2023/02

Description

Analyze and summary the asset class customizing in current system

Understand and organize new asset class business needs

Write customizing documents and customize in development system, transport to test system

Guide users to do a comprehensive test in test system, and transport to productive system after passing the test

Bosch espresso2 project

2021/12-2022/11

Description

Responsible to lead the Carve-out project of MVP from RBCWCollect and sort the current business process which is ERP related

Design and prepare the test case file

Understand the migration concept and prepare the migration whitelist

Clean up the productive system for carve-out migration

Coordinate and guide end user to conduct test in each module, analysis and solve issue detected by user

Responsible for trouble shooting and ABAP debugging

Raise change (customizing or enhancement) request to external consultant or ABAPer, test and release

Sort technical documentation, complete the knowledge pool

IDM MRP automation

2020/09-2021/07

Description

This project is in order to improve IDM planning efficiency, intergrate all the planning tools into one stop.

1. Understand as-is working routines and all the procedures
2. Analyse the business process and help to optimize the planning process
3. Implement MRP monitor to handle ROP and safety stock update, PR auto generation and PO auto conversion
3. Implement RPA to compile one stop Excel file for planning review and update

Pizza box free project

2020/03-2021/02

Description

This project is a part of cost saving action, to remove the pizza box from all finished goods packing.

1. Analyze the as-is business process and draw the flow chart
2. Compile requirement specification for WM customizing change
3. Execute customizing and test and guide users to perform UAT
4. Prepare for MM cutover when go-live

DM eMR project

2019/09-2020/12

Leadee

Description

A new program set to cover direct material/indirect material request process flow

Responsibilities

analyse business process flow

consolidate function specs based on equirement

test program after development

user training

Chip eMR project

2017/09-2018/05

Co leader

Description

A new program set to cover chip matetial request process in SAP.

Responsibilities

analyse business process flow

consolidate function specs based on equirement

test program after development

user training

Education

Huazhong Agriculture University

2006/01-2010/01

Food science and engineering

Bachelor

Languages

English (Mastery) ; Mandarin

Additional Info

PMP Certification
